Precision Meets Punch.

INGOT, is the new kid on the block. And it's creating quite a stir. Designed and created with one thing in mind – precision meets punch (ok that's two things), but if it is the preciser than precise light you're after, the **INGOT** tracklight will give you a perfect wash and sharp edged-curtain of light. Ideal for applications such as gallery lighting to retail lighting in making whatever is on display look its absolute best. And brightest.
